

SFS - W SERVOFLEX (Available by special order)

➤ **Large permissible misalignment, easy installation**

Two elements are used through a spacer plate and large misalignment in a small space can be allowed. Therefore, centering work can be reduced.

➤ **Flexibility in bending and axial directions**

Two elements are mounted to minimize thermal expansions of driving and driven shafts and internal force due to deformation of the support after many hours' operation. A long equipment life can be expected.
